

Project Executable Files & Execution Guide

Date	15 March 2026
Team ID	xxxxxx
Project Name	xxxxxx
Maximum Marks	3 Marks

Project Executable Files & Execution Guide:

To successfully evaluate your project, evaluators require access to your source code, live deployments, and clear instructions on how to build and run your application locally. Complete the sections below to document your project repositories and execution steps.

Step 1: Project Links & Access

Resource Type	URL / Access Link
Source Code Repository (e.g., GitHub, GitLab)	<i>[Paste the public or shared URL here]</i>
Live Deployed Application (e.g., Vercel, AWS, Heroku)	<i>[Paste the live testing URL here]</i>
Demo Video Link (Optional but recommended)	<i>[Paste a link to a YouTube or Drive video demonstrating the project]</i>

Step 2: Key Executable Files & Folder Structure

Briefly explain the primary directories and where the core execution files are located within your repository.

S.No	Folder / File Name	Description & Purpose
1	<i>[e.g., /frontend/src]</i>	<i>[e.g., Contains all React client-side code and UI components]</i>
2	<i>[e.g., /backend/server.js]</i>	<i>[e.g., Main entry point for the Node.js API server]</i>
3	<i>[e.g., database_schema.sql]</i>	<i>[e.g., SQL script to initialize and seed the database]</i>
4	<i>[e.g., .env.example]</i>	<i>[e.g., Template for environment variables required to run the app]</i>

Step 3: Local Setup & Execution Instructions

Provide a step-by-step guide to installing dependencies and launching the application on a local machine.

Step	Action / Terminal Command	Expected Outcome / Notes
1	<i>[e.g., git clone {repository_url}]</i>	<i>[e.g., Downloads the project to the local machine]</i>
2	<i>[e.g., cd backend && npm install]</i>	<i>[e.g., Installs all required backend dependencies]</i>
3	<i>[e.g., Configure .env variables]</i>	<i>[e.g., Setup database credentials and API keys as per .env.example]</i>
4	<i>[e.g., npm start]</i>	<i>[e.g., Launches the server on localhost:5000]</i>
